MUVI Assessment

1. **Tell us about a product decision you owned end-to-end. What was your role, and what was the outcome?**

   I owned multiple product decisions and I would like to one case here:

   StudyWell (name changed): Platform for designed for students to participate in live, community driven focused study sessions.

   Initial Prototype: We build the initial discord like chat rooms where students can share their experiences and connect with other students.

   Problem Statement: Initial engagement on the platform was okay but after few hours the engagement would drop and retention would vary especially from power users that were coming from Discord Server of StudyWell community.

   My role started with problem discovery. After the initial 10 power user interviews which were present on the discord server and the web app, I identified that chat rooms session was not effective for studying as they do not provide any accountability for students. The students were using the discord server because they want to be accountable for study sessions.

   After analysing the relevant data of new users, there was massive engagement drop in the web application and users were keep coming back to discord server. Some of them also provided me some harsh feedback that they 'hate' the web application.

   Based on these insights, I made the decision to redesign the core study room experience and onboarding flow. I defined the product vision, created a PRD, and prioritized an MVP that included a video-based focus room, lightweight onboarding prompts, improved room discovery, leaderboard, streaks maintainability and visible peer presence to create a sense of accountability.

   I conveyed the feedback to the stakeholders of StudyWell and after some convincing we decided to introduce the video-focused study rooms on the web application The next thing I noticed that the number of new users coming to the platform significantly increase and the engagement also increase day by day.

   After implementing the streaks feature just ***like snapchat.*** The students continue to maintain their streaks and that resulted in significant increase in engagement and retention. I kept asking the students with surveys and we built breakrooms to participate in live-audio and video for students that is how we as a team solved the initial engagement problem of the StudyWell web application.

Post-launch, I monitored key metrics such as session duration, repeat participation, and user retention. The changes led to **higher average study time**, **increased repeat usage**, and improved user satisfaction, especially among new users. The decision established a scalable foundation for future features like break-room events and later the streak.

The outcome was initially there were 800 people using the MVP, which after implementing the video-focused study rooms continue to increase and reached daily maximum of **5,000 daily active users** to maximum of **20,000 weekly active users** in which the **40% of weekly active users** became the power users within a month.

Some of the key inputs and outputs are:

Key Inputs:

- 100+ User Interviews
- 500+ Email Survey Forms

Key outputs:

- Session completion rate – 70%
- Average session duration – 80%
- Repeat Participation – 4 days per week

2. **Can you share some examples of work you're proud of (e.g., PRD, wireframe, product link, or doc)?**

Mini – PRD Link - https://drive.google.com/file/d/124Pt3Tn4qNySPhLSpAtiLJy5iJj4S0_e/view?usp=sharing

Work in progress portfolio - http://pdworks.pro/

Some of my previous work as a Product Owner - https://www.figma.com/design/5Y6zCqoXgxDuoXsiH8JVLW/Little-Nudge?node-id=0-1&t=3VJ5taNXn2n9Zf7l-1

1. **Could you please share your current & expected CTC?**

   Current CTC – 10 LPA

   Expected CTC – 14 LPA

2. **Please share your LinkedIn profile link:** https://www.linkedin.com/in/prashantdubeyy/

3. **We are based in Bhubaneswar, Odisha, and have remote openings. Here is our forever remote policy. Please tell us your location preference in a couple of lines. If it's Bhubaneswar, please explain why you are open to relocating to Bhubaneswar. If it's Remote, please tell us why. Remote work has many benefits, but some challenges as well. We ask that you ensure you have a genuine need for and interest in long-term remote work.**

   I am interested in joining the Remote work as I am comfortable with the discipline remote work requires with clear communication, async collaboration, and ownership. I believe that remote work culture will help me do deep focus work as I will not have to context switch but having mentioned that I might still visit Bhubaneswar occasionally to explore the place and the coastal line of India.

   These are my primary reasons and some of my secondary reasons is that I want to be with my family as much as possible but that does not mean that I cannot relocate. I am always open to new experience.
